Thermal Imagers

UNI-T thermal imagers can quickly and effectively measure surface temperatures to identify elevated body temperature. These ergonomic devices can also be mounted on a tripod and set in public locations such as schools, shopping malls, and other high traffic areas. Some models can connect to a PC, display results on a large monitor in real-time, and automatically record data and image when high temperature is detected. These devices are only for early screening, and those with elevated body temperature should seek medical professionals for diagnosis.

- ROI
- Photograph function with SD card storage
- PC software analysis
- Real-time image transmission
- Visual camera (640 x 480) (UTi K series only)
- Type-C USB interface
- 1/4" tripod mounting hole
